

PROFESSIONAL SUMMARY

Frontend Developer with 4+ years of experience delivering scalable, responsive, and high-performance web applications using React.js and modern JavaScript. Specialized in building reusable UI architectures, optimizing application performance, and creating accessible, user-centric interfaces. Experienced in Agile teams, client collaboration, and AI-assisted development workflows to accelerate feature delivery while maintaining clean, maintainable code.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript (Familiar), HTML5, CSS3, Java

Frameworks & Libraries: React.js, Next.js (Familiar), Vite, Bootstrap, Tailwind CSS, Material UI, Shadcn UI

State Management: Redux Toolkit, React Context API, React Query / TanStack Query

Styling & Animations: Tailwind CSS, CSS Modules, SASS/SCSS, Material UI, Framer Motion (Familiar), GSAP (Familiar)

API & Backend Integration: REST APIs, Axios, JWT Authentication, Firebase

Forms & Validation: React Hook Form, Zod

Version Control: Git, GitHub, GitLab — Branching, Pull Requests, Code Reviews

Deployment & Cloud: Vercel, Netlify, Cloudflare (Familiar), Linux

Project Management: Jira, Asana, Trello, MS Project

Design & Prototyping: Figma, Postman, VS Code, Cursor

CMS: WordPress

PROFESSIONAL EXPERIENCE

Networksys Technologies LLP

October 2025 – Present

Frontend Developer | Noida, India

- Engineered scalable, high-performance web applications using React.js with a focus on modular, reusable component architecture, improving long-term codebase maintainability and reducing feature development cycles.
- Designed and implemented fully responsive UI interfaces optimized for cross-browser compatibility (Chrome, Firefox, Safari, Edge) and WCAG accessibility standards, ensuring consistent user experience across all device form factors.
- Architected UI flow structures and workflow design systems, enabling the engineering team to onboard faster and streamline sprint planning with clearly documented component interaction maps.
- Conducted client-facing requirement gathering sessions, translating ambiguous business needs into precise technical specifications, reducing development rework by minimizing mid-sprint requirement changes.

Nettechnocrats IT Services Pvt. Ltd.

November 2023 – September 2025

Frontend Developer (with Project Management Responsibilities) | Noida, India

- Developed and maintained high-performance, responsive React.js web applications using modern JavaScript (ES6+) patterns, achieving a 30% improvement in application speed through component-level optimization and efficient rendering strategies.
- Architected and delivered a modular, reusable component library with integrated state management patterns (Redux), reducing frontend development effort by 20% across multiple concurrent projects and establishing shared UI consistency.
- Boosted Lighthouse performance scores by 30% by implementing advanced optimization techniques including route-based code splitting, dynamic lazy loading, image compression and caching, and DOM restructuring for critical rendering path improvements.

Project Management Contributions

- Orchestrated the delivery of multiple concurrent frontend projects using Asana, Trello, and MS Project, achieving 100% on-time milestone completion through proactive deadline tracking and task ownership assignment.

- Refined cross-functional communication protocols between clients and development teams, leading to a 15% reduction in requirement-related defects by ensuring precise alignment between business expectations and technical specifications.

Wezen Education Pvt. Ltd.

April 2022 – November 2023

Web Developer | New Delhi, India

- Led end-to-end redesign and modernization of three company websites (Coluni Education, Classic IAS Academy, Classic Infra Services), resulting in a 25% reduction in bounce rate and a 15% increase in average session duration through improved UX, visual hierarchy, and content organization.
- Reduced average page load time by 40% — from 5.2s to 3.1s — by systematically optimizing image assets (compression, WebP conversion), refactoring bloated CSS, and restructuring the DOM to eliminate render-blocking elements on key landing pages.

MAJOR PROJECTS

SPATO – Multi-Role Pool Cleaner Robot Management Platform

React.js, REST API, Redux, OpenCV Integration, Modular Architecture

- Architected and delivered a scalable multi-role B2B/B2C web platform with distinct access-controlled portals for Administrators, Business Users, and End Consumers, featuring fully interconnected modules for product catalog, order management, and operational reporting.
- Integrated an OpenCV-based image processing pipeline to extract and parse structured numerical data from uploaded images, eliminating manual data entry and increasing operational automation efficiency significantly.
- Designed a reusable, modular React component architecture enabling rapid feature iteration across all user roles while maintaining consistent UI patterns, reducing component duplication and improving maintainability.

PUEXP – Logistics Management Admin Dashboard

React.js, REST API, Redux, Role-Based Access Control, Data Visualization

- Engineered a full-featured, centralized logistics management admin panel for PUEXP, a third-party delivery management platform, enabling administrators to oversee deliveries, customers, riders, services, dynamic pricing, and real-time tracking from a unified interface.
- Implemented role-based access control (RBAC) with JWT authentication, ensuring secure, permission-scoped access across administrative functions and protecting sensitive logistics and financial data.
- Developed reusable data table components, dynamic form builders, and real-time status tracking modules, reducing implementation time for new features and enabling the operations team to manage complex logistics workflows efficiently.

AI-ASSISTED DEVELOPMENT & ENGINEERING PRODUCTIVITY

Actively integrates AI-assisted development platforms into the engineering workflow to accelerate feature delivery, improve debugging efficiency, generate comprehensive documentation, and enhance overall code quality. Proficient with:

- Code Generation & Completion: GitHub Copilot, OpenAI Codex, used for intelligent autocomplete, boilerplate generation, and pattern-based code suggestions.
- AI-Powered IDEs & Editors: Cursor AI, Windsurf utilized to streamline in-editor AI interactions, refactoring, and multi-file context-aware code generation.

Maintains rigorous code review and manual validation standards to ensure AI-generated output meets production-quality benchmarks, security requirements, and team coding conventions.

EDUCATION

Indira Gandhi National Open University (IGNOU)

Bachelor of Computer Applications (BCA)
